Description:

The video on my ePortfolio was created using ScreenCastify with our instructional coach. This video demonstrates how to gather data from another digital resource that I use in my classroom. The students use this as their "warm up" at the beginning of class so that I can gain data daily on their progress with each skill. We created this video in order to help share the tool with our colleagues throughout the district and introduce them to the tool.

Impact:

Being a teacher-leader at my school, we are expected to share out various tools that we use in the classroom. I invite colleagues into my room in a variety of ways, however, sometimes if they're in a difference building, this isn't possible. That is when the instructional coach and I decided to start using videos to help the other teachers. This allows them to see the tool without leaving their classroom. We kept the video short for the teachers who are limited on time. If they feel interested in this tool and would like assistance, they then are able to contact us for help to get started.

Intent:

The intent of this video was to email it to our colleagues across the district to share this new technology tool. Since technology is becoming a more prominent role in the classroom, it is important that teachers stay up to date on the most recent tools available to them and their impact on the students. This video allows teachers to see what the tool is and entails before having to take class time to test it. They can hear from a teacher-leader in the district the impact it has had on students already.
